

SPRINT 3

Meeting 2

To start the meeting Marcos went far and beyond and showed and explained how the functions that he implemented after the previous meeting work, the functions that were shown were related to tokens, and the logs that we needed for this sprint.

Then we discussed about the things that need to be implemented, and also distributed the work for each member. We also agreed to try to have most of the things done by the 26th of November, so we can have more time in case something goes wrong.
