SPRINT 3
Meeting 1

We discussed about some of the functionalities that we still need to implement from the previous sprints. Ping also shared the modifications that we had related to the token and login function to see if we could solve some of the problems that we had.

At the end we didn't do much related to that, after that we agreed with Manuel that the best would be to update our version with the modifications on one of the branches and he would check it out.
